HIGHWAY/FORESTRY NEWS

Winter Roadway Procedures and Reminders

The 2006/2007 Snowplowing/Sanding Agreement and Release of Liability form is attached. If you wish to have the Village maintain your roadway/driveway in accordance with the Winter Roadway Maintenance Policy, your signed agreement must be returned to the Village Hall along with **\$10.00** by December 27, 2006. **Failure to do so will remove your address from the plowing list effective January 1, 2007.** For snow plowing updates call our information line @ 367-4681 ext #5. A message will be left on this line stating when plows will be out.

The Village plow trucks do not normally begin plowing until a snowstorm has subsided. Exception to the rule would be very heavy snowfalls over a period of time. Plowing of public and private roads is done as needed to ensure access for emergency vehicles and safe passage for other vehicles. It is not intended to be of the quality that may be available from some commercial services. Although we strive to satisfy everyone's needs, the Village plowing service does have budget, manpower, and truck limitations. As a result, we may not be able to meet all the possible requirements of all Village residents. If you have specific or unique requirements, you may need to contract privately for your plowing service.

Heavy snow weighs down branches that hit the windshields of the plows and other large vehicles such as fire trucks. Please trim your drive of low branches and brush. We should have a clearance of 10 feet in height and 2 feet from the edge of the pavement.

Fall Plant Care

This fall before the ground freezes, give your trees and shrubs a long drink of water. The dry weather puts additional stress on plants, which leaves them more susceptible to insect attacks and other plant problems. Evergreens especially require watering to prevent the winter burn or browning of the needles during the early spring. Mulching will also help to insulate the ground from temperature extremes. It will prevent the frost from penetrating as deep which could damage shallow roots. Mulch depth should be 2-4 inches deep and away from direct contact with the trunk.

Removal of Invasive Plants

Fall is an excellent time to cut and remove invasive plants such as buckthorn and honeysuckle. Buckthorn identification is easier in the fall. Its dark green leaves stand out against the fall coloration of our native plants. Chemical applications used against buckthorn, which are still actively growing are less likely to be applied to non-target plants. Also, the herbicides used to kill brush are more effective in the fall. For more information or assistance in plant identification call the village forester. Shoreline cutting does need village approval prior to beginning the work.
