Forestry News

If there is any Oak / Elm pruning you wish to do on your property, **please make sure it is completed by April 15th.**

This warmer weather will activate sap and bark beetles which are known to spread Oak Wilt and Dutch Elm disease. The beetles are attracted to the wound of a fresh cut tree.

A good rule of thumb is don't prune oaks and elms between April 15th and October 15th. If you must prune between these dates you must seal the wound with pruning seal immediately.
