Cornell LAKE WEED TREATMENT

The treatment of Cornell Lake for Eurasian Milfoil control is scheduled for:

Thursday, June 12, 2025
(Weather Permitting)

Selected areas will receive a chemical treatment to control the exotic aquatic plant known as Eurasian water milfoil. This non-native plant can interfere with navigational and recreational activities as well as harming native lake weeds.

The chemicals will not be applied if the applicators feel conditions are unsafe, such as storms, heavy rain or high winds.

We have allowed Friday, June 13th as a rain date. If conditions still do not allow treatment, you will be notified.

The recommended precautions after treatment are as follows:

NO swimming for 1 day

NO garden watering for 21 days
